# CS 2021: Practice Exam 1 SOLUTION

Spring 2019 University of Minnesota

Exam period: 20 minutes

Points available:

Problem 1 (15 pts): Nearby is a small C pro- POSITION A SOLUTION gram which makes use of arrays, pointers, and function calls. Fill in the tables associated with the approximate memory layout of the running program at each position indicated. Assume the stack grows to lower memory addresses and that the sizes of C variable types correspond to common 64-bit systems.

```
1 #include <stdio.h>
  void flub(double *ap, double *bp){
    int c = 7;
    if(*ap < c){
      *ap = bp[1]; /// x's box = 5.5
6
    // POSITION B
7
    return;
8
9 }
10 int main(){
    double x = 4.5;
11
    double arr[2] = \{3.5, 5.5\};
12
    double *ptr = arr+1;
13
    // POSITION A
14
    flub(&x, arr);
15
    printf("%.1f\n",x);
16
    for(int i=0; i<2; i++){
17
      printf("%.1f\n",arr[i]);
18
    }
19
    return 0;
20
21 }
```

	+	+	+
Frame	Symbol	Address	Value
main()       	x   arr[1]   arr[0]   ptr   i		4.5   5.5   3.5   #3056   ?

## POSITION B SOLUTION

Frame	Symbol	Address	Value
main()       	x   arr[1]   arr[0]   ptr   i	#3064 #3056 #3048 #3040 #3036	5.5 5.5 3.5 #3056
flub       	ap   bp   c	#3028 #3020 #3016	#3064 #3048 7

### NOTES

- Both Pos A and B are before i is assigned 0 so i remains undefined

# Problem 2 (10 pts): Fill in the following table of equivalent ways to write these 8 bit quantities. There are a total of 9 blanks to fill in and the first column indicates which blanks occur in which lines. Assume two's complement encoding for the signed decimal column.

   SOLUTION   Blank #s	+     Binary	     Hex	Octal	Unsigned Decimal	
   #1 #2 #3 	   0001 1011   			27 	 
	1010 0101   0101 1011		0245	165	-91
#7 #8 #9	1100 0111	0xC7	0307   	199	-57     -57   

### NOTES

- Octal shows leading 0 which is not strictly necessary
- Typical twos' complement conversion technique show below binary representation: invert bits and add 1

**Backgound:** Write a short C code fragment (1-5 lines) using a C I/O function call to accomplish the stated task. Assume in each case there is a variable FILE \*fh which has been opened appropriately for the I/O operation. Also assume that any variables mentioned have already been declared.

Problem 3 (5 pts): Read three text floating point values from fh formatted as standard decimal point values into double variables r,u,t. Check if the read fails due to reaching the end of file; if so print the message None left.

```
// SOLUTION
int res = fscanf(fh, "%lf %lf %lf", &r, &u, &t);
if(res == EOF){
  printf("None left\n");
}
```

Problem 4 (5 pts): Write 8 characters from the beginning of array str to fh in binary format.

```
// SOLUTION
fwrite(str, sizeof(char), 8, fh);
```

```
#include <stdio.h>
#include <stdlib.h>
// Struct to count positive/negative
// numbers in arrays.
typedef struct {
  int poss, negs;
} pn_t;
pn_t *get_pn(int *arr, int len);
// Allocates a pn_t and initializes
// its field to zero. Then scans array
// arr increment poss for every 0 or
// positive value and negs for every
// negative value. Returns the pn_t
// with poss/negs fields set. If arr
// is NULL or len is less than 0,
// returns NULL.
int main(){
  int arr1[5] = \{3, 0, -1, 7, -4\};
  pn_t *pn1 = get_pn(arr1, 5);
  // pn1: {.poss=3, .neg=2}
  free(pn1);
  int arr2[3] = \{-1, -2, -4\};
  pn_t *pn2 = get_pn(arr2, 3);
  // pn2: {.poss=0, .neg=3}
  free(pn2);
  int *arr3 = NULL;
  pn_t *pn3 = get_pn(arr3, -1);
  // pn3: NULL
  return 0;
```

}

Problem 5 (15 pts): Nearby is a main() function demonstrating the use of the function get\_pn(). Implement this function according to the documentation given. My solution is about 12 lines plus some closing curly braces.

```
1 // SOLUTION
2 pn_t *get_pn(int *arr, int len){
    if(arr==NULL || len < 0){</pre>
      return NULL;
4
    }
5
    pn_t *pn = malloc(sizeof(pn_t));
6
    pn->negs = 0;
    pn->poss = 0;
8
    for(int i=0; i<len; i++){
9
       if(arr[i] < 0){
10
         pn->negs++;
11
      }
12
      else{
13
         pn->poss++;
14
      }
15
    }
16
    return pn;
17
18 }
```
